

PERSPEX

Perspex® Cast Acrylic Sheet S-Lux, D-Lux & Prismex®

Available in a wide range of thickness options

Specifically designed to give optimum performance in terms of even light distribution and superb brightness, our patented edge-lit light technology: Perspex® S-Lux, D-Lux and Prismex® does just that!

Perspex® S-Lux has a special textured finish on one side of the sheet, producing an even illumination across the surface. Perfect for anything from small signs to large poster boxes and Euro posters, it is a versatile product giving optimum edge lighting capability regardless of the size of your sign.

Perspex® D-Lux has the specially textured finish on both sides of the sheet developed specifically for edge-lit light-diffusing signs where you need to convey messages and graphics from multiple angles and directions. It offers the same superb light management properties as Perspex® S-Lux, but does it from both sides. Perspex® D-Lux is the ideal choice for small double sided poster boxes, and extra bright single sided sign boxes.

Perspex® Prismex® is a speciality acrylic sheet with a printed dot matrix pattern on the surface which acts to reflect and refract light across the sheet to give maximum, bright and even illumination. It is ideal for completely bespoke speciality applications such as wall cladding with slim even illumination, dramatic stage sets in theatres and studios as well as light panels that give extra vibrancy and life to photography and graphics.

In addition Perspex® S-Lux, D-Lux and Prismex® offer all the product characteristics you have come to expect from Perspex®: outstanding weathering, light weight, easy to install and excellent durability.
